

5 Tips for buying a new

HVAC UNIT

All **HVAC** systems have an expiration date. They become less efficient within approximately 10 to 12 years. Parts may become difficult to find as well. Here are our top five tips for getting the best value when buying a new **HVAC unit**.

REVIEW THE UNIT SIZE FIRST

With a poorly sized unit, **energy bills** can increase because the system cannot operate at its peak efficiency and your comfort level will suffer. Unnecessary wear and tear on parts can also increase maintenance and repair costs.

CHECK FILTRATION AND OTHER RATINGS

We can't say enough that inefficient filtering is expensive and can be unhealthy. **Bad filtration** of dust, mold spores, VOCs, and other fine particulates, for example, can lead to allergy, immune system, and respiratory problems.

ALWAYS CONSIDER THE BRAND

Some manufacturers have been designing units for decades and offer inexpensive, domestic replacement parts. You may be able to find a cheaper unit from a new brand, but it could break down more often and cost you more in the long run.

CHOOSE A SMART THERMOSTAT

With a manual **thermostat**, you must adjust settings repeatedly. With a smart one, you can program settings to make adjustments automatically. You can also check and adjust settings remotely on your phone.

ASK FOR A WRITTEN QUOTE

Some retailers and installers won't provide a quote in writing because they know that they must honor it. Trustworthy companies always provide their quotes in writing.

For **HVAC installation** assistance, speak with a member of our Cosby Heating and Cooling team. We're a trusted HVAC contractor in Mount Vernon, OH. We know the best brands in the industry and local and federal HVAC offers and rebates.
